Profile

Senior IT professional with 20+ years of experience, currently working as an Azure Integration Architect embedded with a major Swedish transport & logistics enterprise (via Ciklum). I design and deliver system-to-system integrations on Azure Integration Services — Service Bus, API Management, Logic Apps (Standard), and Azure Functions — with infrastructure as code (Bicep/ARM) and CI/CD on Azure DevOps. Beyond implementation, I own the architecture side of delivery: requirement analysis with business stakeholders, risk assessment, and designing for security and resilience. Former Enterprise Architect for VW Group/ŠKODA and long-time .NET performance specialist. I work comfortably in distributed, English-speaking Nordic enterprise environments and use AI tooling daily to accelerate delivery without compromising quality.

Core Competencies

Azure Integration: Azure Service Bus, API Management (APIM), Logic Apps (Standard & Consumption), Azure Functions, Event-driven architecture, SFTP integrations, REST APIs, integration patterns (messaging, pub/sub, orchestration)

Cloud & IaC: Microsoft Azure, Bicep, ARM Templates, Azure DevOps (YAML pipelines, CI/CD), Application Insights, Log Analytics (KQL), monitoring & observability

Architecture: Solution & integration architecture, risk and impact analysis, security & resilience design, microservices, CQRS, Domain-Driven Design, performance optimization

Backend: .NET / C#, ASP.NET Core, Entity Framework Core, LINQ optimization, SQL Server, PostgreSQL, Redis, RabbitMQ, Docker

Ways of Working: Enterprise agile (SAFe, LeSS), stakeholder management, technical leadership, mentoring, AI-assisted engineering (Claude, Copilot)

Professional Experience

Azure Integration Architect / Engineer — Ciklum

May 2025 – present · Prague / remote

End client: major Swedish transport & logistics enterprise (Nordic ferry & freight operator)

- Design and deliver system-to-system integrations across a complex enterprise ecosystem: Azure Service Bus, API Management, Logic Apps (Standard), and Azure Functions connecting internal platforms and third-party services (including SFTP-based partner exchanges).
- Own architecture decisions end-to-end: requirement clarification with business stakeholders, risk and impact assessment, and design for security, reliability, and resilience (idempotency, retry/backoff, dead-lettering).
- Deliver all infrastructure as code (Bicep/ARM) with CI/CD on Azure DevOps YAML pipelines; maintain consistent conventions across dozens of integration projects in a seven-person team.
- Hands-on production troubleshooting and root-cause analysis using Application Insights and Log Analytics (KQL).
- Day-to-day collaboration in English with Swedish client architects and delivery managers.

Senior Software Developer / Hands-on PM — AppOnFly

Jan 2025 – Mar 2025 · Prague

- Led a time-boxed MVP delivery of a cloud gaming platform; managed a team of seven while staying hands-on (ASP.NET Core, PostgreSQL, Docker, RabbitMQ, Firebase).
- Ensured on-time, high-quality release aligned with the product owner's vision; optimized workflows and resolved technical blockers.

Enterprise Architect — Qinshift (VW Group / ŠKODA AUTO)

Sep 2023 – Aug 2024 · Prague

- Designed high-level architecture for the Connected Car platform as a member of ŠKODA's technical cluster.

- Performed technical, risk, and impact analysis; translated business requirements into technology solutions and implementation plans.
- Collaborated across teams to ensure successful implementation and evaluated solution effectiveness post-delivery.

Senior .NET Developer — CN Group CZ (Danish delivery organization) Feb 2021 – Aug 2023 · Prague

- Built checkout and payment solutions for online retailers and a loan management system (ASP.NET Core, EF Core, SQL Server, Redis).
- Specialized in performance optimization — complex LINQ, reporting pipelines, and caching strategies delivering significant infrastructure cost savings.
- Conducted technical interviews and mentored developers.

Game Developer — Sky Network

May 2020 – Jan 2021 · Prague

- Reworked multiplayer netcode and server/client architecture (Unity, C#, WebSockets); added WebGL support; hardened Linux servers and built a custom Node.js deployment tool in an international team.

IT Manager — INSIA a.s. (insurance broker network)

Nov 2019 – May 2020 · Prague

- Headed internal ERP development; drove ISO 27001 security compliance and managed the development team.

Earlier career

1997 – 2019

- Founder of Scheema Digital (2013–2019): web development, e-commerce solutions and database optimization for SMB clients. Prior roles in utility development (OpenStreetMap tooling, graph algorithms) and full-stack engineering. 20+ years of continuous hands-on IT practice.

Education & Certifications

Master's degree (in progress), Process Management

2026 – present

College of Economics and Management (VŠEM), Prague

Bachelor's degree, Management

2021 – 2025

College of Economics and Management (VŠEM), Prague — Thesis: Streamlining the Production Process in a Software Company (Lean Six Sigma, DMAIC)

Microsoft certifications: [AZ-305 Azure Solutions Architect Expert — in progress / planned 2026]

Selected Writing & Open Source

- SIEVE Eviction Algorithm for Caching — improving cache hit rates with a simple algorithm change (patriksima.github.io)
- How to Build Complex Reports Without Performance Issues — LINQ optimization and CQRS patterns
- Open source: NotionExporter, SieveCache (github.com/patriksima)

Languages

Czech (native) · English (professional working proficiency, daily use with Nordic clients)
